TASK 1

1. Spin-up VM-1-server in GCP. It must match next conditions:
 - a. OS Centos 7 should be installed
 - b. LDAP server should be installed and configured
 - c. UI (phpldapadmin) should be installed
 - d. Provision via terraform

Screenshots with results:

```
google_compute_firewall.vpc_firewall_ex: Creating...
google_compute_instance.ldap-server: Creating...
google_compute_firewall.vpc_firewall_ex: Still creating... [10s elapsed]
google_compute_instance.ldap-server: Still creating... [10s elapsed]
google_compute_firewall.vpc_firewall_ex: Creation complete after 13s [id=projects/devops-lab-2020/global/firewalls/external-rule]
google_compute_instance.ldap-server: Still creating... [20s elapsed]
google_compute_instance.ldap-server: Creation complete after 23s [id=projects/devops-lab-2020/zones/us-central1-c/instances/ldap-server]

Apply complete! Resources: 2 added, 0 changed, 0 destroyed.

Outputs:
External IP = http://23.236.59.243/ldadmin/
```
